

The great thing about UpStage is that you don't need to download and install the software.

UpStage

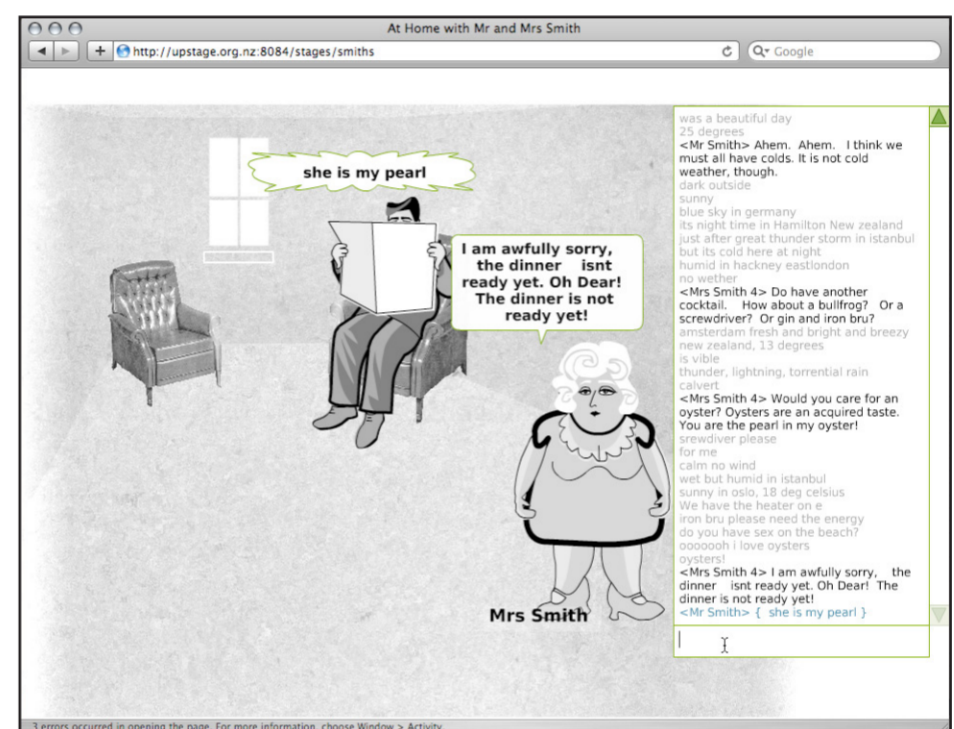

Let ME Go by Antonella Diana and Helen Varley Jamieson, onsite in Denmark and online in UpStage, 2009

UpStage is free and open source; anyone can download and look at the code behind the application. Programmers can write new code and share improvements and new features with all UpStage users.

I Miss You, Great To See You Again 2.0, Anaesthesia Associates (Dan Untitled and Paul Bradley, Wellington, NZ), 080808 UpStage Festival; this screengrab shows the logged-in player interface.

The application sits on a central server (host computer) and participants (players and audience) need only a web browser, on any operating system. The browser needs to have the Flash Player plug-in, which most browsers come with.

At Home with Mr & Mrs Smith, by The Catastrophic Primadonnas (UK), 090909 UpStage Festival

UpStage is written in Python, and works with third-party applications such as Festival for text2speech (synthesised speech) and Flash to serve the media to the client browser. It is licenced under a dual-license: GNU General Public Licence (GPL) and the Creative Commons Attribution-NonCommercial-ShareAlike 3.0 License.

UpStage is currently maintained and developed by open source developers and students from Auckland University of Technology. If you are interested in getting involved, please contact us!
